Sor# 	Changed a file from non-ASCII to ASCII ENTERE Verified by:  (ST)
	Changed the margins in cases where the sequence text was "wrapped" down to the next line
	Edited a lormat error in the Current Application Data section, specifically:
	Edited the Current Application Data section with the actual current number. The number inputted by the applicant was the prior application data; or other
)	Added the mandatory heading and subheadings for "Current Application Data".
)	Edited the "Number of Sequences" field. The applicant spelled out a number instead of using an integer
	Changed the spelling of a mandatory field (the headings or subheadings), specifically:
	Corrected the SEO ID NO when obviously incorrect. The sequence numbers that were edited were:
	Inserted or corrected a nucleic number at the end of a nucleic line. SEO ID NO's edited:
	Corrected subheading placement. All responses must be on the same line as each subheading. If the applicant placed a response below the subheading, this was moved to its appropriate place.
	Inserted colons after headings/subheadings. Headings edited included: •, . '
,	Deleted extra, invalid, headings used by an applicant, specifically:
	Deleted: non-ASCII "garbago" at the beginning/end of files: secretary initials/filename at end of file page numbers throughout text; other invalid text, such as
	Inserted mandatory headings, specifically:
	Corrected an obvious erro: in the response, specifically:
	Edited identifiers where upper case is used but lower case is required, or vice versa.
	Corrected an error in the Number of Sequences field, specifically:
	A "Hard Pago Break" code was inserted by the applicant. All occurrences had to be deleted.
	Deloted ending stop codon in amino acid sequences and adjusted the '(A)Length: field accordingly (error due to a Patentin bug). Sequences corrected:
	Other:
